MS Mechanical Engineering - May 2017

Booz Allen Hamilton

October 12, 2016

Dear Sir or Madam,

I am Cyril Bernardo, a MS Mechanical Engineering student at New York University. Taking part in Booz Allen Hamilton's Summer Games Program for internship would be a great next step in my career as an aspiring engineer. The Summer Games Program advertises an eclectic program in a high-pace environment which matches my diverse background in government research, laboratory research, technology, and leadership.

Currently, I am working at the NASA Johnson Space Center as an Acoustic Modeling and Mechanical Design intern where I am developing acoustic simulations and prototyping new technologies for space missions. At Warby Parker, I consulted with stakeholders within the company to find ways that physical technologies could improve different processes within the company, such as quality control, customer experience, and market research. As their Applied Research intern, I stepped out of my comfort zone to develop computer vision and inertial tracking tools in Python. Throughout my college experience, I was able to correspond with faculty and students across all departments while in a variety of leadership positions; now, I confidently communicate with others—clients or coworkers—to understand what they need and to find solutions together.

If there is anything that my time in school has taught me, it is to always take the chance to do something different and to do something meaningful—I hope to fulfill this with Booz Allen Hamilton. I look forward to speaking with you to give and gain insight on my experience and the Summer Games Program.

Yours faithfully,

Cyril Jerome Bernardo
